

## *Enterprise IT as-a-Service (EITaaS)*

The Air Force is pursuing a strategy to reposture the cyberspace domain for the highly-contested environment. EITaaS is the approach to leverage industry to achieve that strategy.

Through EITaaS, industry will provide innovative network services that meet AF mission requirements.

EITaaS will enable the AF to redirect government personnel to mission assurance and cyberspace defense roles.

## *Implementation*

**AFNIC is lead for Implementation Plan:**

- Strategic partnering with corporate Air Force and MAJCOMs
- Apply DoD/Services lessons learned and gain knowledge and experience through pilot projects

*Cyber Engineering & Integration Excellence*

# Did you know?

## Goal:

- Reposture the AF cyberspace domain through industry EITaaS solutions

## EITaaS will leverage industry for solutions in five key areas:

- Cloud and Data Services
- Long-Haul Communications
- Base-Level Communications and Infrastructure
- Voice and Video
- Mobile and End-User Devices and Management

## Near-Term Strategy and Actions:

- Initiate studies of low-risk bases
- Establish phased pilot efforts to prove industry can provide solutions meeting utility, warranty, and mission assurance requirements, and to gain knowledge and experience

## Challenges:

- Air Force cultural change
- DoD/AF policy inhibitors
- Minimizing organizational seams
- Defining inherently governmental ops
