

AFNIC Auditing

The screenshot shows the AFNIC SCORE Reporting website. At the top, there is a navigation menu with links for Home, SCOM Reports, SCCM Reports, DCM Reports, CHES Reports, and External Links. The main content area is titled "Reports by Service" and features a grid of buttons for various services: AFNET Hygiene, Cloud Hosted Enterprise Service, Domain Controllers, Exchange, Lync 2010, SCCM, SCORCH 2012, SCOM 2012, TMG 2010, SQL 2014, DRA 2012, WINDOWS 10 SDC 5.2, MEMBER SERVERS, and DHCP 2012. To the right of the grid is an "Announcements" section with a list of recent updates and audits. A "Feedback" link is located at the bottom left of the page.

Enterprise Config Management Auditing

Auditing is a sub-task of Configuration Management providing feedback whether systems are deployed properly, maintained within standards or drifting from established configuration baselines.

Audits feed Tier 1-3 operators with preventative maintenance/remediation actions and planning information.

Initial audits focused on Core Enterprise services but efforts are expanding to support Enterprise PMO systems such as Standard Desktop Clients.

Auditing Team AFNet Solutions

Our core services for the Air Force Enterprise include:

- Enterprise Core Services Health Audits
- Network Hygiene Audits
- SCORE Reporting Site:
<https://cs.eis.af.mil/sites/10026>

Cyber Engineering & Integration Excellence

Did you know?

Current Work:

- Client Health reports
- Core Enterprise Services Performance Monitoring
- Configuration and STIG Auditing
- Patch Compliance Tracking
- Windows 10 Readiness
- Cloud Migration Readiness Audits
- Stale User Account Identification
- Service Account Compliance Audit
- Standard Desktop Client Deployment Validation

Future Work:

- Partner with organizations across the Air Force to provide robust reporting solutions and empower dynamic business decisions
- Refine existing solutions and deploy new capabilities based on operational needs
